## Solve Polynomials

Determine all real and complex solutions.

15. 
$$x^3 - 5x^2 + 3x - 15 = 0$$

16. 
$$x^4 - 3x^3 - 24x^2 + 80x = 0$$

## **Applications**

19. The weight of an ideal round-cut diamond can be modeled by  $w = 0.0074d^3 - 0.087d^2 + 0.32d$ , where w is the diamond's weight (in carats) and d is its diameter (in millimeters). According to the model, what is the weight of a diamond with a diameter of 12 millimeters?

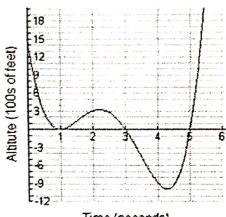

20. The profit P (in millions of dollars) for a t-shirt manufacturer can be modeled by  $P = -x^3 + 5x^2 + 9x$ , where x is the number of t-shirts produced (in millions). Currently, the company produces 5 million t-shirts and makes a profit of \$45,000,000. What lesser number of t-shirts could the company produce and still make the same profit?

21. A box has a height of x - 4 inches and a length of x + 3 inches. If the volume of the box is  $2x^3 - 3x^2 - 23x + 12$  cubic inches, determine the width of the box.

22. When fighter pilots train for dog-fighting, a "hard-deck" is usually established below which no competitive activity can take place. The polynomial graph given shows Maverick's altitude (y in 100s of feet) above and below this hard-deck during a 5 second (x) interval.

- b. How many total seconds was Maverick above the hard-deck during the first 5 seconds?
- c. After how many seconds is Maverick 300 feet above the hard-deck?
- d. Determine the equation of the function in factored form.

Time (seconds)

## Rates of Change

23. Find the average rate of change from x = -1 to x = 3 for each of the functions below.

a. 
$$a(x) = 2x + 3$$

b. 
$$b(x) = x^2 - 2$$

c. 
$$c(x) = 2^x - 1$$

d. Which function has the greatest average rate of change over the interval [-1, 3]?

24. In general as  $x \to \infty$ , which function eventually grows at the fastest rate?

$$a. \quad a(x) = 3x$$

b. 
$$b(x) = x^3$$

c. 
$$c(x) = 3^x$$
